### **PROFILE**

Experienced iOS developer, mathematician, and former commercial fisherman. I write clean, efficient, maintainable code with the goal of building apps that are accessible to everyone. I thrive when I'm working with talented people to solve hard problems.

### **iOS DEVELOPMENT EXPERIENCE**

iPHONE APP | Tomorrow 2017-2018 | Seattle, WA

- Developed, from infancy to maturity, award-winning financial planning app.
- Conceptualized with VP of Product design of custom UI to collect and present detailed financial information in a way that was easy for users to understand.
- Onboarded and trained new engineers in use of Re and ReactiveSwift to manage app state and asynchronous data flow.
- Performed daily code reviews to improve team coding standards and app performance.
- Researched and implemented numerous libraries and frameworks for use in app to guickly reach minimum viable product.
- Developed a traffic control algorithm to delay UI updates until complete, interdependent data sets had been returned by the API.
- Developed and maintained client-side business logic to determine when users had completed legally necessary tasks to generate legal documents, and to guide them through unfinished tasks.
- Coded test suite to validate data models and business logic with Quick and Nimble.
- Wrote and maintained internal documentation for build pipeline tools, including Carthage, Cocoapods, ReSwift, custom build scripts, BuddyBuild (for continuous integration testing and test build deployment), and iTunesConnect.
- Migrated project dependency management from Cocoapods to Carthage to improve Swift build times.
